Ice Off Date - February 24, 2017
November Secchi Disc Readings: Maximum - 7.5 ft.
Average - 7.5 ft.

LAKE LEVEL

DNR Winter Lake Elevation Expectations - 927.10 feet
Average Lake Elevation - 927.58 feet

LAKE MANAGEMENT PROGRAM

After Waterways approved the Harvester Purchase, DLSD started the process to order the Harvester for 2018.

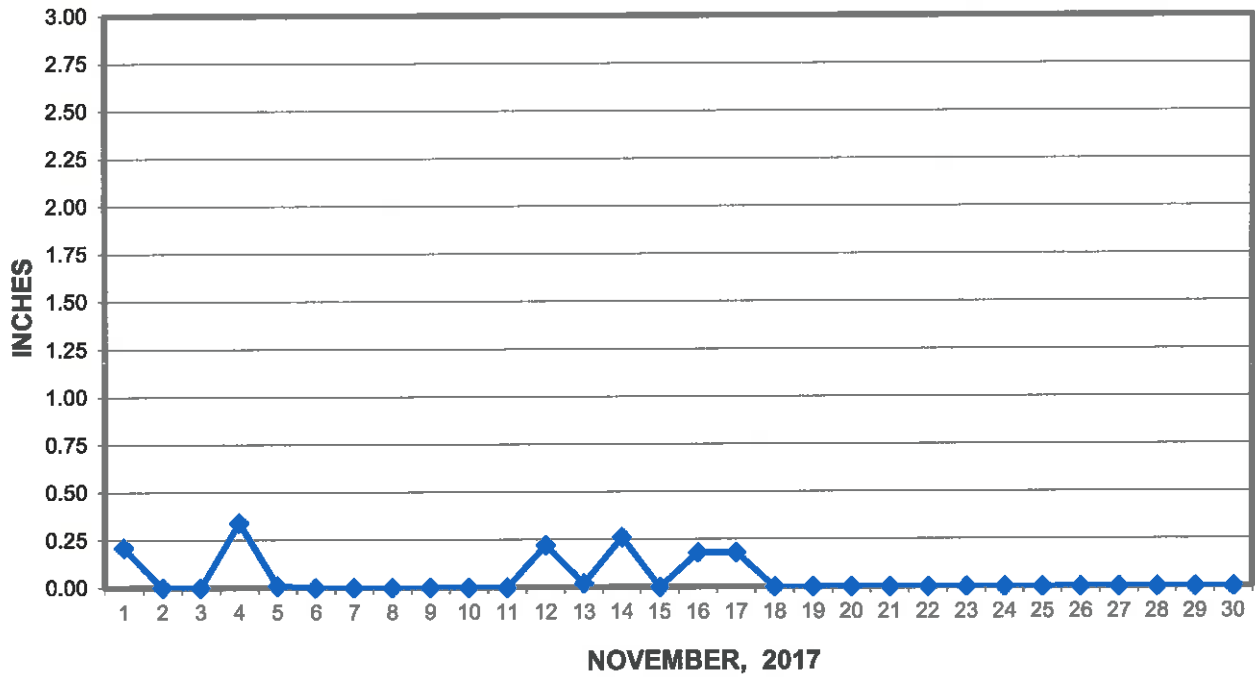

Brown's channel stream bank repairs are the final step needed for the first grant and should be completed sometime in the spring to satisfy implementation of the first project for the land.

Continued work on the harvesters is in progress.

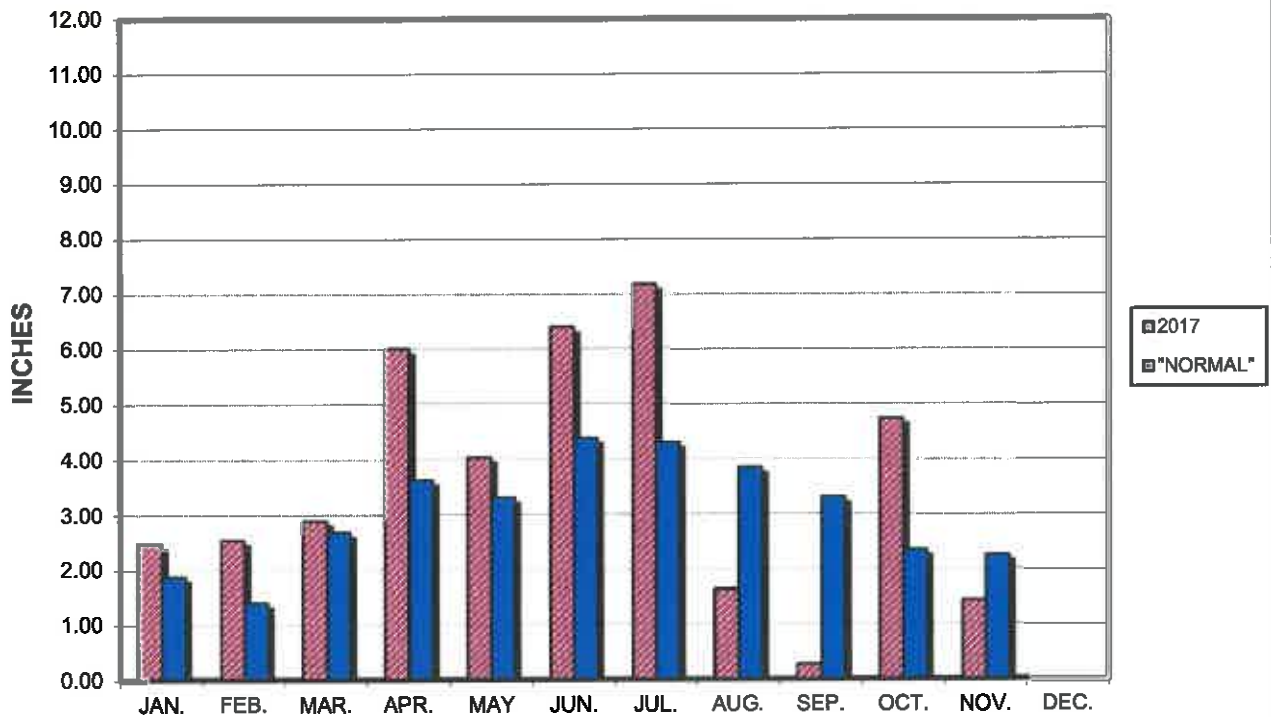

A resolution was passed to move forward with further review and grant writing for a versatile piece of equipment called the Truxor. The tool can aid in skimming the surface floaters and possibly algae.
